

# Recipes data extraction

Maciej Chrabąszcz  
Aleksander Kozłowski

# Goal

**Enrich the RecipeNLG dataset**

# Dataset description

The RecipeNLG dataset contains 2231142 cooking recipes (>2 million). Including recipes ingredients and instruction scraped from the internet. It's main goal is to allow creation of models which generate recipes conditioned on products.

Bień, Michał, et al. "RecipeNLG: A cooking recipes dataset for semi-structured text generation."

4	4	Reeses Cups(Candy)	["1 c. peanut butter", "3/4 c. graham cracker ...]	["Combine first four ingredients and press in ...]	www.cookbooks.com/Recipe-Details.aspx?id=659239	Gathered	["peanut butter", "graham cracker crumbs", "bu...]

1 c. firmly packed brown sugar

1/2 c. evaporated milk

1/2 tsp. vanilla

1/2 c. broken nuts (pecans)

2 Tbsp. butter or margarine

3 1/2 c. bite size shredded rice biscuits

# Planned workflow

- Add nutritional information
- Add dietary tags
- Product names and quantities (NER)
- Prepare strong foundations for 2nd project

# Nutritional information

In order to enrich the data set with nutritional information we plan to use data provided by U.S. Department of Agriculture (<https://fdc.nal.usda.gov>). Their API contains information about micro and macro-nutrients as well as food category.

# Dietary tags

In order to enrich the dataset we want to add dietary tags for example “vegan”, “dairy free” etc.

To achieve that we will train models on the dataset found on kaggle which contains recipe tags (including dietary).

Britto, L., Pacífico, L., Oliveira, E., & Ludermir, T. (2020, October). A cooking recipe multi-label classification approach for food restriction identification.

# NER

To extract information about quantity and names of products used in recipes we will use NER model on recipes ingredients.

Pretrained model was introduced "A Named Entity Based Approach to Model Recipes".

If this model won't be sufficient we can train our own NER model on "Tasteset".

- Diwan, N., Batra, D., & Bagler, G. (2020, April). A named entity based approach to model recipes.
- Wróblewska, A., Kaliska, A., Pawłowski, M., Wiśniewski, D., Sosnowski, W., & Ławrynowicz, A. (2022). TASTEset--Recipe Dataset and Food Entities Recognition Benchmark.

# Pretrained NER model

Tag	Significance	Example
NAME	Name of Ingredient	salt, pepper
STATE	Processing State of Ingredient.	ground, thawed
UNIT	Measuring unit(s).	gram, cup
QUANTITY	Quantity associated with the unit(s).	1, 1 1/2 , 2-4
SIZE	Portion sizes mentioned.	small, large
TEMP	Temperature applied prior to cooking.	hot, frozen
DF (DRY/FRESH)	Fresh otherwise as mentioned.	dry, fresh

1/2

QUANTITY

tsp.

UNIT

vanilla

NAME

# Future work ideas

- Recipe recommender based on tags e.g. 'vegan'
- Language model
- Automatic nutritional information about given recipe

**Time for your  
questions!**
